

Customer Retention and Churn Analysis

This report presents a customer churn analysis using telecom customer data to identify retention trends, customer behavior patterns, and business improvement opportunities. The analysis focuses on understanding factors contributing to customer churn and improving customer retention strategies.

Executive Summary

The analysis identified customer retention trends and high-risk customer segments within the telecom business. Customers with higher monthly charges and short-term contracts demonstrated relatively higher churn behavior. The dataset was cleaned and standardized to improve reporting consistency and analytical accuracy. Total Customers: 7043 Customer Retention Rate: 73.46%

Data Cleaning and Preparation

Several preprocessing steps were performed before conducting customer analysis. Data preparation activities included: - missing value handling - numerical data conversion - duplicate record removal - formatting standardization These processes improved data quality and ensured more reliable business insights.

Customer Churn Analysis

Customer churn analysis revealed that a significant percentage of customers discontinued services during the analysis period. Retention-focused business strategies may help reduce churn risk and improve long-term customer loyalty.

Contract Type Analysis

Customers with month-to-month contracts demonstrated relatively higher churn behavior compared to customers with long-term agreements. Long-term contracts contributed positively to customer retention and business stability.

Monthly Charges Analysis

Customers with higher monthly billing amounts demonstrated increased churn probability, indicating potential pricing sensitivity within specific customer segments. Pricing optimization strategies may help improve customer retention performance.

Payment Method Analysis

Payment method analysis identified variations in customer distribution across billing channels. Understanding payment behavior may support improved customer engagement strategies and service experience optimization.

Business Recommendations

Based on the analysis findings, the following business recommendations are suggested: 1. Improve retention programs for high-risk customers with month-to-month contracts. 2. Review pricing strategies for customers with higher monthly charges. 3. Increase customer engagement initiatives to strengthen long-term customer relationships. 4. Encourage long-term contract adoption to improve customer retention stability. 5. Continuously monitor churn-related metrics to support proactive business decision-making.

Conclusion

This analysis successfully identified customer churn patterns, retention risks, and operational improvement opportunities. The findings from this report can support customer retention strategy, pricing optimization, and long-term business growth initiatives. Continuous monitoring of customer behavior is recommended to improve overall retention performance.
